...ABSTRACT: beyond specs and press releases. Microsoft announced the availability of its first .Net Web service: MapPoint .Net Basic Services

2.0. MapPoint .Net is a SOAP (Simple Object Access Protocol)/WSDL (Web Services Description Language) Web service...

TEXT: Microsoft plots its Web services course with release of MapPoint .Net

MICROSOFT'S PR MACHINERY is in overdrive lately, promoting the company's vision of...

...press releases.

On April 10, Microsoft announced the availability of its first Net Web service: MapPoint Net Basic Services 2.0. MapPoint .Net is a SOAP (Simple Object Access Protocol)/WSDL (Web Services Description Language) Web service...

...of Microsoft sites and applications as well as a publicly available fee-based Web service, MapPoint Net promises reliable mapping data that is regularly updated.

Eventually you will be able to tell MapPoint .Net where you are, and it will kick back the latest information including road construction...

...the service is limited to maps, driving routes, and commercial and public points of interest.

MapPoint .Net is an excellent proving ground for .Net. Tracking all the changes in the world...

...than attempt to duplicate such a massively complex undertaking. So

the
question isn't whether MapPoint .Net is a useful service, but rather,
whether you should trust Microsoft to provide such a critical piece of
functionality.

In a nutshell, MapPoint .Net is a collection of Web services
functions
that delivers to developers the ability to add location specificity and
awareness to custom Web applications. A sales force automation app
could
call into MapPoint Net to retrieve complete driving directions to
customer sites. A point-of-sale application could locate all the stock
of a
specified item within a given geographic region. A user carrying a
GPS-equipped smart phone could get turn-by-turn directions to the
nearest
Holiday Inn. MapPoint Net will be used for just such purposes by
Microsoft's own HomeAdvisor and Carpoint...

...us, the company used its mapping technology to do everything from
demographic analysis to regional product adoption visualization.

Using standardized SOAP and WSDL, developers can integrate Microsoft's
mapping technology in...

...a standard (most notably from XML-RPC), SOAP is an open standard.
According to Microsoft, MapPoint .Net beta testers used not only
Visual
Studio .Net, but Perl and Java, too.

From...

...transactions. Each transaction costs 4 cents to 1 cent depending on
the
volume purchased. All MapPoint .Net functions, such as render map and
route, are charged at the same rate. As part of the subscription,
Microsoft
will render maps with subscriber logos and icons . Customer profile
data,
including previously viewed maps and favorite locations, will
eventually be
stored. MapPoint Net will provide statistics on usage as well.

By subscribing to Microsoft's MapPoint .Net service, developers can
add
mapping functionality to their applications.

Future releases of MapPoint .Net will supply demographic data.
Applications that collect customer mailing addresses can use MapPoint
.Net to not only verify the address' validity, but also to retrieve
such
statistics as the average age and income of residents in the immediate
area.

Pricing makes MapPoint Net too expensive for most advertising-
supported
Web sites. Microsoft as sole host will give...

...t have a track record in services and is relying on channel partners for both sales and support. MapPoint .Net looks like a valuable service and its SOAP support makes it available to a...

...but potential subscribers may want to take a wait-and-see approach.

THE BOTTOM LINE

MapPoint .Net

EXECUTIVE SUMMARY: Microsoft has begun to deliver its Net vision. Although mapping is an...

Linux lives, Microsoft maps
Kay, Russell
Computerworld v34n14 PP: 61 Apr 3, 2000
ISSN: 0010-4841 JRNL CODE: COW
WORD COUNT: 881

ABSTRACT: Corel Corp.'s Corel Linux Deluxe and Microsoft Corp.'s MapPoint 2001 are discussed. Except for an unrelated hardware issue that stemmed from a mixed SCSI-EIDE hard-disk environment, the installation of Corel Linux Deluxe went smoothly. MapPoint 2001 is a mapping program that has a lot of intriguing and powerful databae capabilites...
TEXT: A Linux installation without pain, anda Microsoft product that shines. Will wonders never cease? By Russell Kay

I'VE BEEN CURIOUS about Linux...

...Netscape Navigator and an image-editing program, without fuss and without even opening the manual.

MAPPOINT 2001

Overall, I was impressed with how simply it went. I've installed just about ...

...my documents and applications in the "My Home" folder, which is accessed via a desktop icon , just like the Windows "My Documents" folder.

Although I installed Linux into its own Linux...

...and now it has supplied a firstrate package that can help us answer

it.

The product is MapPoint 2001, a mapping program that has a lot of intriguing and powerful database capabilities and...

...information system (GIS), but in some ways it's better and easier to use. With MapPoint, you can drag a highlighted area of a spreadsheet representing, say, sales in various states during a certain period - and

drop it onto a map of the...

...data graphically. You can also use data directly from Access and Outlook.

You can give MapPoint 2001 a list of addresses and have it plot the most

efficient route to travel...

Divide and conquer

Baker, Sunny; Baker, Kim

Journal of Business Strategy v20n5 PP: 16-19 Sep/Oct 1999

ISSN: 0275-6668 JRNL CODE: JST

WORD COUNT: 2426

...TEXT: at the University of Tennessee at Knoxville. According to Dr. Noon, companies can create transportation, sales territory, and supply chain optimization models using GIS.

Mapping: The Ascendant Standard

Through mapping software...

...entirely new ways. Mapping enables users to identify future opportunities and geographic trends for increased sales and profitability.

This type of business mapping, also called market mapping, is by no means

...

...Web-and this revolutionizes the possibilities of mapping in business.

Both the GIS and analysis products employ data from government, commercial, and self-compiled information sources to create the maps.

The

maps incorporate symbols, three-dimensional representations, colors, and

charts to display trends, locations, and relationships in business data...

...on speed, data sources, and display options. For example, Microsoft's

entry level mapping program, **MapPoint** 2000, is only \$110 retail and comes with general geographic data for the United States, down to the street address level. **MapPoint** 2000 is a useful starting tool for basic location analysis, especially if you have lots...

...and customer programming capabilities, Tactician's Selling Machine bundle, a powerful mapping system for realigning **sales** territories and related **sales** analysis, runs about \$7,900.

It has enough data to cover territories across the United...

...business trends.

At the surface level, the dividing line between a fullfeatured analysis-level mapping **product** and a full-blown GIS is increasingly fuzzy. Today, most precision mapping **products** combine similar display, thematic, and streetlevel mapping functions. The more expensive **products** allow finer levels of detailed analysis and customization to specific application requirements. They can also...can benefit from mapping applications.

For example, New York-based Avon uses GIS to track **sales** representatives' records and **sales** penetration by country, state, county, city, and even by a specific street. The software produces multicolored maps and grids that show not only where **sales** are already concentrated, but also where Avon needs to beef up recruiting efforts for new...

...reengineering of Avon is designed to generate \$400 million in annual corporate savings and a **sales** growth target of 8% to 10%.

The mapping software also helps Avon see which areas have a preponderance of specific ethnic or other groups and then respond by targeting specific **product** lines to those groups. Even more exciting, managers can click on an **icon** and look at **sales** performance based on the population and ethnicity and conclude that "we're doing well compared...of customers meeting age and income criteria that can be used to develop new banking **products** and promotions for specific market groups. A Buffalo-based financial institution also uses mapping software...

...develop targeted marketing programs. Apple Computer uses market mapping software to perform geographic planning for **sales** territories, field resource deployment, and targeting marketing programs. And major consumeroriented companies like Coca-Cola...and should be an important strategic tool in business.

The recent entry of Microsoft's **MapPoint** 2000 is evidence that mapping is becoming a core business application. When Microsoft embraces a...

Word Count: 3092

Desktop data mapping: a review of MapPoint , Maptitude, and GeoMedia. (Evaluation)

... began my career as a librarian just when Dialog, Westlaw, and LexisNexis were emerging as **products** for research. Soon after, personal computers became a professional tool. Does anyone recall the days...

...wholesale, retail, and dealer prices for vehicles and how it computed the calculations.

* Identify certain **products** in an accounting system, locate the cost, **sales** price, and salesperson data, and provide a report of **product**

margins for each person.

* Write a program to import a telephone log file and identify...

...in the future.

Knowing nothing about mapping software, I first turned to the Internet for **product** reviews and survey articles. I found nothing current. Next I sought specialists in the field...

...the software for years. Second, most universities and educational institutions use ArcView because of the **product** 's power and its advantageous pricing for colleges and universities. (Editor's Note: For more on ArcView, see the article on desktop GIS tools beginning on page 70.) All the **products** recommended by friendly university map librarians required extensive time and training to master, something that...

...fit the project requirements.

After discussions with some graduate students, I began looking at

three **products** :

- * Microsoft Corporation's **MapPoint**

- * Caliper Corporation's Maptitude

- * Intergraph Corporation's GeoMedia

After contacting the publishers, I got to work testing the three **products** .

In each case, I began with an Access database of 40,000 company addresses. For...

...of the maps was to evaluate the competition sites in relation to out target sites.

MapPoint

MapPoint 2002: \$249

MapPoint Europe 2002: \$249

I began with this **product** because it came as part of the Microsoft

Office 2000 **product** I had already purchased. Having worked extensively

with Access and Excel, I felt comfortable with the online help structure of

the Microsoft **products** . Within approximately 10 hours of working with **MapPoint** , I created my own data sets and placed the data on maps. The maps

were could not adjust the map size for wall sized print-outs.

The **product** does not include 2000 Census data, which would have

satisfied one requirement. Nevertheless, for a quick and easy tool to produce lettersized maps, **MapPoint** is acceptable.

The real power of this package lies in its ability to select an...

...495: single copy; volume discounts available

Established in 1983, Caliper offers Maptitude as an ideal **product**

for individuals with computer skills who need a powerful mapping tool, but

do not want...

...map all my addresses in the states under analysis. Each data set had its

own **symbol** , which I could change and manipulate as the client requested.

Also, I was not limited...

...the ability to work with data other than addresses. I could easily add

location size, **sales** , or customer volume data for the competition and create charts to use in conjunction with...

...analysis to determine economic success and failure in a region.

The flexibility in modifying colors, **symbols** , and scales made it

particularly easy to create the desired output. When I completed the...

...4,700 employees, offices worldwide, over 2 decades of experience, and a suite of 17 **products**, Intergraph's GeoMedia is by far the most sophisticated **product** in my comparison. In 1993, Intergraph moved all its applications to Windows.

The **product** line provides complete scalability. Organizations may add functionality as their requirements change. GeoMedia serves desktop...

...are greatly enhanced, but closely follow the standards and functionality familiar to Windows users.

This **product** is positioned for large-scale projects -- transportation, municipal public works, utilities, engineering and construction projects...became a separate feature class. This enabled me to display each data set with different **symbols**.

In addition to printing a copy of the map or creating an output file for...

...of GeoMedia vastly exceeded my needs in terms of mapping information and precision. However, the **product** is a superb solution for those individuals with sophisticated requirements who have the time to...

...the Internet. Training is essential to fully master the software.

Bottom Line

All of these **products** enabled me to create data sets that could be mapped correctly to specific locations. When...

...software budget, and staff resources, with the last being the most important in my view. **MapPoint**, though handy for novices to get started

or casual users, lacked the features needed for...

...organization could afford the time for one to two individuals to learn

and master the **product**. GeoMedia requires an additional investment of time to master some address matching software such as...

...importing and storing the data. If an organization needed the full power

of the GeoMedia **product** line, it should acquire a GIS-trained specialist

to work extensively with the software an...

Art Wittmann was formerly editor of Network Computing.

The **MapPoint** .Net development key

MapPoint .Net is not Microsoft's first attempt at providing mapping capabilities to developers. **MapPoint** , the desktop mapping app in Microsoft Office, uses ActiveX to embed maps in applications. In many ways,

MapPoint .Net behaves as would a hosted copy of **MapPoint** , with an important distinction: **MapPoint** 's ActiveX interfaces offer far more functionality than the initial release of **MapPoint** .Net. Packaging **MapPoint** .Net as a Web service frees users from having to run **MapPoint** , or even Windows, to access Microsoft's extensive cartographic database.

Getting started as a **MapPoint** .Net developer requires subscribing

to the service. Microsoft grants customers a 30-day free trial. During the evaluation period, applications can access the full suite of **MapPoint .Net** services, but may only submit a limited number of transactions. Rendered maps (returned as...

...call to the Find, Render, or Route service- - specifies a data source.

For example, the **MapPoint .NA** data source connects apps to location data, street-level maps, and driving routes for the United States and Canada, with highway data for Mexico. **MapPoint .EU** contains similar data for Europe, with some countries (notably Eastern Europe) limited to highway...

...languages.

Each transaction requires authentication, but interestingly, Microsoft has decided not to use Passport. Instead, **MapPoint .Net** authenticates subscribers using the encrypted HTTP Digest method.

Microsoft

maintains a secure extranet for customers to upload logos and icons , run reports, or change passwords.

Documentation and sample code are available in Microsoft's free **MapPoint .Net** SDK, downloadable from www.microsoft.com/mappoint/net. The

SDK is strictly for users of Visual Studio .Net, but **MapPoint .Net** publishes WSDL service descriptions that can be used to automate development in Web services-aware tools from vendors such as IBM and Oracle.

-- Tom Yager

THE BOTTOM LINE

MapPoint . Net

Executive Summary: Microsoft has begun to deliver its .Net vision.

Although mapping is an...

Location-Based Information Can Be Turned Into Business Insight With
Microsoft MapPoint 2002.

... News Release/ -- Microsoft Corp. (Nasdaq: MSFT) today announced
the
release to manufacturing of Microsoft(R) MapPoint (R) 2002 North
America,

the latest version of its business-mapping and location-based data visualization software. The company is simultaneously announcing MapPoint 2002 Europe, which will cover most Western European countries and will be available in five...

...prnh/20000822/MSFTLOGO)

In addition to completely updated and expanded map content and demographic data, MapPoint 2002 offers key new features for end users and developers, including greater map customization, territory...

...business decisions, location information is a key component," said Michael Graff, general manager of geography products for Microsoft.

"With

MapPoint 2002 up-to-date location and demographic data, our customers can chart, display and analyze...

...and future performance."

Up-to-Date Maps, Location and Demographic Information

Unlike traditional mapping applications, MapPoint 2002 offers users a complete combination of high-quality terrain, political data and roadway maps...

...including Geographic Data Technology, Navigation Technologies and Claritas Inc.

Customized Maps Better Represent Business Information

MapPoint 2002 gives users the ability to customize maps to better represent their business information. A...

...mapping areas. For example, once a territory is created, customers can overlay information such as sales or customer data, so regional or territory performance information can be easily compared and analyzed...

...also be added to maps to highlight multiple demographic or other data variables, and custom icons and pushpins can be displayed on the maps to help communicate locations of customers, retail...

...points of interest.

Greater Application Programmability Yields Custom Solutions

For developers, the new version of MapPoint includes an ActiveX Control, a more comprehensive object model and improved support for COM Add ...

...These enhancements greatly expand the ability of corporate developers or independent software vendors to integrate MapPoint functionality within a

broad range of their business applications and custom solutions. With the rich functionality possible with the ActiveX Control, developers can embed a fully functional **MapPoint** map within their application and integrate the maps to work with whatever location data that application is using.

"With this release, **MapPoint** has become a serious spatial information management tool," said David Sonnen, IDC senior consultant for Spatial Technologies. "New features and access to mapping functionality through ActiveX will make **MapPoint** a good **productivity** option for a large group of business users."

Integrate Maps Into Everyday Work

The tighter integration of **MapPoint** 2002 with Office XP enables customers to easily transform geographic data from Office applications

-- such as Word and Excel -- into data-rich maps using **MapPoint** Office Add-Ins and Office XP's Smart Tag technology. Customers can incorporate maps into the work they do every day. Now users can map data -- such as **sales** figures by region or customer locations -- from Microsoft Excel, Access or the Outlook(R) messaging and collaboration client. They can embed

MapPoint maps into reports, presentations and Web sites using Word, the PowerPoint(R) presentation graphics program...

...tool. They can also add maps to brochures and flyers with Publisher.

Pricing and Availability

MapPoint 2002 North America and Europe will be released to manufacturing on April 23 and will be generally available at the end of May. The **product** will be available from Microsoft resellers, Microsoft

licensing programs and at <http://shop.microsoft.com/> at an estimated retail

price of \$249*. Current license holders of **MapPoint** 2000, **MapPoint** 2001

or Office XP (any suite) are eligible for a \$50 (U.S.) or \$75 (Canadian)

rebate when they acquire **MapPoint** 2002. European pricing will be comparable but will vary per currency and is subject to...

...and Internet technologies for personal and business computing. The company offers a wide range of **products** and services designed to empower people through great software -- any time, any place and on any device.

* Reseller prices may vary.

NOTE: Microsoft, **MapPoint**, ActiveX, Outlook, PowerPoint and FrontPage are either trademarks or registered trademarks of Microsoft in the United States and/or other countries.

The names of actual **products** and services mentioned herein may be the trademarks of their respective owners.

TO FIND OUT WHERE YOU are, nothing beats a map. Investors can
view
regions of the country in which your sales are growing, for example,
by
spotting green areas on a map; or they can note difficult areas you've
identified in red. Trends are instantly noticeable.

Microsoft MapPoint 2000 is business mapping software that lets
you
pinpoint customer or business sites by typing...

...even annotate each location on a map with text such as custom
driving
directions or symbols such as lines and boxes.

The program has some 14 million street-level segments for...

...also provides geographic boundaries for non-U.S. locations.

You'll find numerous options in MapPoint 2000. If you're
plotting
populations, for instance, you can specify range sizes (such as...

...Publisher, or PowerPoint; or download it to your Palm OS or Windows
CE
handheld PC.

MapPoint supports four types of maps: shaded area, push-pin,
shaded circles, and graduated circles. Wizards...

...labels. You can also use more than 50 different demographic census-
based
variables to compare sales by, say, income level, gender, or age
group.

MapPoint is for illustrating points on a map. It doesn't provide driving directions between two points; but you can use a highlighting tool to select starting and ending points, and MapPoint will color in the route and provide distance in miles or kilometers.

PROS Easy to...

...and plot data

CONS Details only for U.S. locations

RATINGS

ABSTRACT:

...and its emphasis is focused sharply on generating color-coded thematic

maps The \$249 Microsoft **MapPoint** 2001 offers a well-designed interface

and a slew of useful features. DeLorme Earthmate with...

... divide mapping programs into two categories: geographic information

system (GIS) and global positioning system (GPS) **products** . GIS programs

help you create color-coded maps that visually depict demographic and business data...

...a graphical, geographical analysis.

BusinessMap Pro is the only program here capable of actually designing **sales** territories. We were able to divide cities into a number

of color-coded regions by...

...3D charting module. We used it to create bar charts based on the demographic and **sales** data in the map.

The program specializes in ring studies--bull's-eye charts showing

...

...on plotting business data and household distributions, but overkill for most home-based businesspeople.

Microsoft **MapPoint** 2001
HOC RATING 1 2 3 4 5 6 7 8

Along with the clean Lines and elegant interface of a well-designed

Microsoft Office **product** , **MapPoint** 2001 boasts a slew of useful features, making it the pick of the litter for GIS software.

In some ways, the \$249 **MapPoint** is a cross between BusinessMap Pro and XMap: It offers a powerful Data Mapping Wizard...

...on top representing the average household size.

In addition to typical drawing and annotation tools, **MapPoint** includes a route planner and a GPS navigation mode for taking the program on the...

...contacts and created an optimized route to reach them in just a few easy steps.

MapPoint includes demographic data for 1980, 1990, 1999, and projections for 2004, and can download maps...

...import data from Outlook. Even if it is the most costly GIS software we tested, **MapPoint** 's features and ease of use add up to a great bargain if you have...StreetFinder and GPS

HOC RATING 1 2 3 4 5

Rand McNally is a mapping **icon** , so we had high expectations for StreetFinder DeLuxe 2000 and GPS. Unfortunately, it's...

...GIS SOFTWARE DeLorme XMap Business Rating: 7

ESRI BusinessMap Pro 2.0 Rating: 6 .

Microsoft **MapPoint** 2001 Rating: 8

GPS PACKAGES DeLorme Earthmate GPS Receiver with Street Atlas

RATINGS

HOME OFFICE COMPUTING rates **products** on a scale of 1 to 10--with few 9's or 10's--based...

...rare standouts in these areas), ease of use, and suitability for home

offices. The ?? and ?? **symbols** indicate pros and cons.

NAVIGATION BY HAND

If you thought folding a map was tricky...

...handheld computer has more than its share of navigation tools, and

two
of the GPS **products** we reviewed have Palm versions. If you have
DeLorme's
Earthmate Road Warrior (\$220), you...

...and a business-traveler Web site that provides hotel searches,
airport
terminal maps, and a **sales** -lead service.

MapBlast (www.mapblast.com) will help business users find a
FedEx
drop-off...and Yahoo! Maps (maps.yahoo.com) are two of the most
popular.

... at the University of Tennessee at Knoxville. According to Dr.
Noon,
companies can create transportation, sales territory, and supply
chain
optimization models using GIS.
Mapping: The Ascendant Standard
Through mapping software...

...entirely new ways. Mapping enables users to identify future
opportunities and geographic trends for increased sales and
profitability.
This type of business mapping, also called market mapping, is by

no
means...

...Web--and this revolutionizes the possibilities of mapping in business.

Both the GIS and analysis **products** employ data from government, commercial, and self-compiled information sources to create the maps. The maps incorporate **symbols**, three-dimensional representations, colors, and charts to display trends, locations, and relationships in business data...

...on speed, data sources, and display options.

For example, Microsoft's entry level mapping program, **MapPoint 2000**, is only \$110 retail and comes with general geographic data for the United States, down to the street address level. **MapPoint 2000** is a useful starting tool for basic location analysis, especially if you have lots...

...and customer programming capabilities, Tactician's Selling Machine bundle, a powerful mapping system for realigning **sales** territories and related **sales** analysis, runs about \$7,900. It has enough data to cover territories across the United...

...trends.

At the surface level, the dividing line between a full-featured analysis-level mapping **product** and a full-blown GIS is increasingly fuzzy. Today, most precision mapping **products** combine similar display, thematic, and street-level mapping functions. The more expensive **products** allow finer levels of detailed analysis and customization to specific application requirements. They can also...can benefit from mapping applications.

For example, New York-based Avon uses GIS to track **sales** representatives' records and **sales** penetration by country, state, county, city, and even by a specific street. The software produces multicolored maps and grids that show not only where **sales** are already concentrated, but also where Avon needs to beef up recruiting efforts for new...

...reengineering of Avon is designed to generate \$400 million in annual corporate savings and a **sales** growth target of 8% to 10%.

The mapping software also helps Avon see which areas have a preponderance of specific ethnic or other groups and then respond by targeting specific **product** lines to those groups. Even more exciting, managers can click on an **icon** and look at **sales** performance based on the population and ethnicity and conclude that "we're doing well compared
...

...of customers meeting age and income criteria that can be used to develop new banking **products** and promotions for specific market groups. A Buffalo-based financial institution also uses mapping software...
...develop targeted marketing programs. Apple Computer uses market mapping software to perform geographic planning for **sales** territories, field resource deployment, and targeting marketing programs. And major consumer-oriented companies like Coca...and should be an important strategic tool in business.

The recent entry of Microsoft's **MapPoint** 2000 is evidence that mapping is becoming a core business application. When Microsoft embraces a

Microsoft (www.microsoft. com) announced the release of Microsoft
MapPoint

2002 North America, the third version of its consumer/business
mapping

program. The company simultaneously rolled out MapPoint 2002 Europe,
which is available in five European languages. Both products are
aimed

at the average business person and feature functionality familiar to
Microsoft Office users. To see a map showing sales of multiple
products

by ZIP code, for instance, customers Simply drag and drop their data
onto

the map. The product 's data mapping wizard then guides the user
through

the process step-by-step.

...North America and 4.8 million kilometers in Europe.

For developers, the new version of MapPoint includes an ActiveX
Control,

a more comprehensive object model, and improved support for addins.

This
enables developers to embed fully functional MapPoint data into their
applications. End users will be able to put maps into other Microsoft
products , including Word, Excel, and Outlook.

The 2002 version supports GPS data for waypoints, territory management,
and
drivetime analysis. Users can create custom symbols from bitmaps,
icons
, and cursors and can locate pie and bar charts on maps.

(USE FORMAT 7 OR 9 FOR FULLTEXT)
MICROSOFT: MapPoint 2002 opens up a world of possibilities

Microsoft today announced the release to manufacturing of
MapPoint
2002, a new version of the business mapping application that
combines

powerful mapping and analysis tools with the simplicity of Microsoft Office. MapPoint enables users to visually analyse and communicate business information using maps. In a conversation with PressPass UK, Zena Girdler, product -marketing manager for MapPoint at Microsoft, discusses how MapPoint 2002 helps businesses visualise data using geographic information.

PressPass: How can businesses make use of geographic information using MapPoint 2002?

... graph. Rarely is this information analysed in its most logical format - on a map. With MapPoint , businesses have the ability to visualise their information in a new way and get a...

...competition and their customers. By understanding the location component of common business data, such as sales or customer lists, they can make more informed decisions. This viewpoint also helps to identify...

...successful?

Girdler: Some excellent examples of geographical data that are useful to any business include sales data, competitor locations, customer lists and service records. Using MapPoint , a business can identify whether geographic or demographic variables may be affecting sales of a particular product .

They can examine whether their business could become more efficient by reassigning sales or delivery territories. They can investigate whether the location of competitors could be influencing the sales performance of a particular location. Or they can analyse different areas to determine whether they appear to be good prospects for expanding the business.

MapPoint can also be extremely valuable in day-to-day business operations.

For example, a business...
...a short drive of a hotel where she is planning to hold a meeting. With MapPoint 2002, she can use the new "Drivetime Zones" feature around that facility, then select all...

... Zones feature is also useful in planning delivery routes or customer

visits.

PressPass: What differentiates **MapPoint** from other business mapping tools?

Girdler: **MapPoint** is unique because it comes with all of the data and tools customers need to...

... creates and licenses the highest quality spatial and demographic data available, whereas many other mapping **products** require users to purchase additional data sets to perform certain functions.

MapPoint 2002 has vastly simplified some functions that have traditionally been complex and made them more accessible to the average business user. For example, to see a map showing **sales** of multiple **products** by ZIP code, **MapPoint** customers can simply drag and drop their data onto the map.

MapPoint's data-mapping wizard will guide them through the process, step by step. There are...
...are familiar with any Microsoft Office application, they can immediately get up and running with **MapPoint**.

PressPass: How have the customisation capabilities of **MapPoint** been improved?

Girdler: First, new data-mapping features such as pie charts, series charts and column charts, as well as multiple pushpin **symbols**, have been added to increase users' ability to customise the way their maps are displayed.

Custom pushpin **symbols** are now offered so users can put their company's logo into their maps, or any other **symbol** they want to create, in addition to the dozens of **symbols** already included in the **product**.
To many, this may seem like a minute detail, but the ability to add a...

...alone makes a map more personal, and it seems to be resonating very well with **MapPoint** users.

PressPass: What does support for Microsoft ActiveX, Microsoft Visual Basic and COM mean for businesses rolling out **MapPoint**?

Girdler: It gives software developers the ability to access **MapPoint** functionality programmatically, so they can start integrating customised

maps and location intelligence into their own solutions or line-of-business applications. **MapPoint** can now be built into an independent software vendor's application or into an organisation...

...include mapping within the context of their existing solutions.

PressPass: How has the content in **MapPoint** 2002 been improved?

Girdler: We're constantly working to ensure that our content is up...

... Claritas and CompuSearch. Plus, we've added more points of interest, so when customers launch **MapPoint** 2002 they will be able to locate restaurants, airport information, gas stations, ATMs, hotels, hospitals...

... level coverage and data in more areas. We also provide a Web search capability in **MapPoint** that works with MSN to search the Internet for related links for any place a customer clicks on the map.

PressPass: How will **MapPoint** 2002 work with Office XP?

Girdler: We've always done a great job of sharing information to and from Office applications, and **MapPoint** 2002's Office XP integration goes even further. In Excel, for example, customers can highlight a table of

numbers and click the **MapPoint** button on the toolbar. If there is a geographic variable within the spreadsheet, **MapPoint** will embed a map and launch the data-mapping wizard to give them a view...

... of geographic data such as a state, city name or address in Word or Excel, **MapPoint** can automatically look up that location or address.

Customers can also export selected information into... in Excel, or embedding maps into Microsoft Word documents or Microsoft PowerPoint presentations.

PressPass: Will **MapPoint** 2002 be packaged with Office?

Girdler: No, **MapPoint** is available only as a standalone application.

However, **MapPoint** is part of the Microsoft Office family of applications.

This means that **MapPoint** 2002 looks and behaves like Office and can easily share data with Office applications.

PressPass: How does **MapPoint** 2002 fit into Microsoft '.NET'?

Girdler: We are exploring several exciting opportunities for using

Microsoft...

...a few of the things we'll be working on for future releases.

Right now, MapPoint gives customers the ability to connect to the Internet and download the most current road...

... so driving directions include warnings and notices for areas with planned construction activity. And with MapPoint 2002, customers can communicate their information via the Web using the enhanced "Save as Web Page" feature.

Web pages saved from MapPoint 2002 can include hyperlinks to other maps, Web pages or files, and users can set their MapPoint Web pages to update each time the underlying MapPoint file is saved so the maps on the Web page always show the latest data.

PressPass: Will MapPoint eventually become a Web-based service?

Girdler: This is something we are looking at quite...

... and Internet technologies for personal and business computing. The company offers a wide range of products and services designed to empower people through great software -- any time, any place and on...

MapPoint 2002 opens up a world of possibilities.
TEXT:
M2 PRESSWIRE-24 April 2001-MICROSOFT: MapPoint 2002 opens up a world
of
possibilities (C)1994-2001 M2 COMMUNICATIONS LTD
RDATE:24042001
Microsoft today announced the release to manufacturing of
MapPoint
2002, a new version of the business mapping application that combines
powerful mapping and analysis tools with the simplicity of Microsoft
Office. **MapPoint** enables users to visually analyse and communicate
business information using maps. In a conversation with PressPass UK,
Zena
Girdler, **product** -marketing manager for **MapPoint** at Microsoft,
discusses how **MapPoint** 2002 helps businesses visualise data using
geographic information.
PressPass: How can businesses make use of geographic information
using **MapPoint** 2002?
Girdler: Much of the information stored in company databases
today
has some sort of...graph. Rarely is this information analysed in its
most
logical format - on a map. With **MapPoint** , businesses have the
ability to
visualise their information in a new way and get a...

...competition and their customers. By understanding the location
component of common business data, such as **sales** or customer lists,
they
can make more informed decisions. This viewpoint also helps to
identify...
successful?
Girdler: Some excellent examples of geographical data that are
useful to any business include **sales** data, competitor locations,
customer lists and service records. Using **MapPoint** , a business can
identify whether geographic or demographic variables may be affecting
sales of a particular **product** .
They can examine whether their business could become more
efficient
by reassigning **sales** or delivery territories. They can investigate
whether the location of competitors could be influencing the **sales**
performance of a particular location. Or they can analyse ...different
areas to determine whether they appear to be good prospects for
expanding
the business.
MapPoint can also be extremely valuable in day-to-day business
operations.

For example, a business...

...a short drive of a hotel where she is planning to hold a meeting.
With

MapPoint 2002, she can use the new "Drivetime Zones" feature around that

facility, then select all...Zones feature is also useful in planning delivery routes or customer visits.

PressPass: What differentiates **MapPoint** from other business mapping tools?

Girdler: **MapPoint** is unique because it comes with all of the data and tools customers need to...

...creates and licenses the highest quality spatial and demographic data

available, whereas many other mapping products require users to purchase

additional data sets to perform certain functions.

MapPoint 2002 has vastly simplified some functions that have traditionally been complex and made them more accessible to the average business user. For example, to see a map showing sales of multiple products by ZIP code, **MapPoint** customers can simply drag and drop their

data onto the map.

MapPoint's data-mapping wizard will guide them through the process, step by step. There are...

...are familiar with any Microsoft Office application, they can immediately get up and running with **MapPoint**.

PressPass: How have the customisation capabilities of **MapPoint** been improved?

Girdler: First, new data-mapping features such as pie charts, series charts and column charts, as well as multiple pushpin symbols, have been

...added to increase users' ability to customise the way their maps are displayed.

Custom pushpin symbols are now offered so users can put their company's logo into their maps, or any other symbol they want to create,

in addition to the dozens of symbols already included in the product.

To many, this may seem like a minute detail, but the ability to add a...

...alone makes a map more personal, and it seems to be resonating very well with **MapPoint** users.

...does support for Microsoft ActiveX, Microsoft Visual Basic and COM mean for businesses rolling out **MapPoint**?

Girdler: It gives software developers the ability to access **MapPoint** functionality programmatically, so they can start integrating customised maps and location intelligence into their own solutions or line-of-business applications. **MapPoint** can now be built into an independent software vendor's application or into an organisation...

...include mapping within the context of their existing solutions.

PressPass: How has the content in **MapPoint** 2002 been improved?

Girdler: We'...Claritas and CompuSearch. Plus, we've added more points of interest, so when customers launch **MapPoint** 2002 they will be

able to locate restaurants, airport information, gas stations, ATMs, hotels, hospitals...level coverage and data in more areas. We also provide a Web search capability in **MapPoint** that works with MSN to search

the Internet for related links for any place a customer clicks on the map.

PressPass: How will **MapPoint** 2002 work with Office XP?

Girdler: We've always done a great job of sharing information to and

from Office applications, and **MapPoint** 2002's Office XP integration goes

even further. In Excel, for example, customers can highlight a table of

numbers and click the **MapPoint** button on the toolbar. If there is a geographic variable within the spreadsheet, **MapPoint** will embed a map

and launch the data-mapping wizard to give them a view...

...of geographic data such as a state, city name or address in Word or Excel, **MapPoint** can automatically look up that location or address. Customers can also export selected information into...in Excel, or embedding maps into Microsoft Word documents or Microsoft PowerPoint presentations.

PressPass: Will **MapPoint** 2002 be packaged with Office?

Girdler: No, **MapPoint** is available only as a standalone application.

However, **MapPoint** is part of the Microsoft Office family of applications.

This means that **MapPoint** 2002 looks and behaves like Office and

can easily share data with Office applications.

PressPass: How does **MapPoint** 2002 fit into Microsoft '.NET'?

Girdler: We are exploring several exciting opportunities for using

Microsoft...a few of the things we'll be working on for future releases.

Right now, **MapPoint** gives customers the ability to connect to the Internet and download the most current road...

...so driving directions include warnings and notices for areas with planned construction activity. And with **MapPoint** 2002, customers can communicate their information via the Web using the enhanced "Save as Web Page" feature.

Web pages saved from **MapPoint** 2002 can include hyperlinks to other

maps, Web pages or files, and users can set their **MapPoint** Web pages to

update each time the underlying **MapPoint** file is saved so the maps on the Web page always show the latest data.

PressPass: Will **MapPoint** eventually become a Web-based service?

Girdler: This is something we are looking at quite...and Internet technologies for personal and business computing. The company offers a wide range of **products** and services designed to empower people through great software -- any time, any place and on

ABSTRACT: Microsoft's PR machinery is in overdrive lately, promoting the
company's vision of Internet-enabled applications. However, the
long-promised suite of hosted Web services, codenamed Hailstorm and
later
dubbed .Net My Services, has yet to see daylight beyond specs and press
releases. Microsoft announced the availability of its first .Net Web
service: MapPoint .Net Basic Services 2.0. MapPoint .Net is a SOAP
(Simple
Object Access Protocol)/WSDL (Web Services Description Language) Web
service, hosted by Microsoft, that extends location-sensitive mapping
capabilities to Internet-connected applications and devices.

TEXT: Microsoft plots its Web services course with release of MapPoint .Net

MICROSOFT'S PR MACHINERY is in overdrive lately, promoting the company's vision of Internet-enabled applications. Recent weeks have seen the rollout of Visual Studio .Net, Microsoft's crosslanguage development platform, and the .Net Framework for enterprise applications. However, the long-promised (and, by some, long-dreaded) suite of hosted Web services, codenamed Hailstorm and later dubbed .Net My Services, has yet to see daylight beyond specs and press releases.

On April 10, Microsoft announced the availability of its first .Net Web service: MapPoint .Net Basic Services 2.0. MapPoint .Net is a SOAP (Simple Object Access Protocol)/WSDL (Web Services Description Language) Web service, hosted by Microsoft, that extends location-sensitive mapping capabilities to Internet-connected applications and devices. Debuting as an extension of Microsoft sites and applications as well as a publicly available fee-based Web service, MapPoint .Net promises reliable mapping data that is regularly updated.

Eventually you will be able to tell MapPoint .Net where you are, and it will kick back the latest information including road construction and even traffic conditions. Initially, the service is limited to maps, driving routes, and commercial and public points of interest.

MapPoint .Net is an excellent proving ground for .Net. Tracking all the changes in the world's roadways is well beyond the means of all but the largest and most dedicated companies. Even Federal Express and UPS might prefer to subscribe to this service than attempt to duplicate such a massively complex undertaking. So the question isn't whether MapPoint .Net is a useful service, but rather, whether you should trust Microsoft to provide such a critical piece of functionality.

In a nutshell, MapPoint .Net is a collection of Web services functions that delivers to developers the ability to add location specificity and awareness to custom Web applications. A sales force automation app could call into MapPoint .Net to retrieve complete driving directions to customer sites. A point-of-sale application could locate all the stock of a specified item within a given geographic region. A user carrying a GPS-equipped smart phone could get turn-by-turn directions to the nearest Holiday Inn. MapPoint .Net will be used for just such purposes by Microsoft's own HomeAdvisor and Carpoint online real estate and automotive

buying guides.

Microsoft has been involved in mapping applications for a while now.

MSN

features a consumer-oriented mapping application and in some cars you find

a Microsoft-powered driving assistant. Internally, Microsoft tells us, the

company used its mapping technology to do everything from demographic analysis to regional product adoption visualization.

Using standardized SOAP and WSDL, developers can integrate Microsoft's mapping technology in their own applications. All in all, that's good news.

While SOAP has competition as a standard (most notably from XML-RPC), SOAP

is an open standard. According to Microsoft, MapPoint .Net beta testers used not only Visual Studio .Net, but Perl and Java, too.

From a value of service point of view, the questions get tougher.

Microsoft

promises 99.9 percent uptime with credits for missed transactions. Each transaction costs 4 cents to 1 cent depending on the volume purchased.

All

MapPoint .Net functions, such as render map and route, are charged at the

same rate. As part of the subscription, Microsoft will render maps with subscriber logos and icons. Customer profile data, including previously viewed maps and favorite locations, will eventually be stored. MapPoint Net

will provide statistics on usage as well.

By subscribing to Microsoft's MapPoint.Net service, developers can add mapping functionality to their applications.

Future releases of MapPoint .Net will supply demographic data.

Applications

that collect customer mailing addresses can use MapPoint .Net to not only

verify the address' validity, but also to retrieve such statistics as the

average age and income of residents in the immediate area.

Pricing makes MapPoint Net too expensive for most advertising-supported Web

sites. Microsoft as sole host will give pause to some enterprise and carrier-class customers who would rather rely on their own service infrastructure. It's also worth noting that aside from Passport, this is

Microsoft's first .Net service offering. The company doesn't have a track

record in services and is relying on channel partners for both sales and

support. MapPoint .Net looks like a valuable service and its SOAP support

makes it available to a wide range of applications and devices, but potential subscribers may want to take a wait-and-see approach.

THE BOTTOM LINE

MapPoint .Net

EXECUTIVE SUMMARY: Microsoft has begun to deliver its Net vision. Although mapping is an obvious choice for functionality provided through a subscription service, potential customers must decide whether Microsoft is the right provider.

TEST CENTER PERSPECTIVE: Microsoft has admirably used SOAP and XML to reduce complicated mapping functionality to a Web service that can easily be accessed with a few lines of code.

Art Wittmann was formerly editor of Network Computing.

ABSTRACT: Corel Corp.'s Corel Linux Deluxe and Microsoft Corp.'s MapPoint

2001 are discussed. Except for an unrelated hardware issue that stemmed from a mixed SCSI-EIDE hard-disk environment, the installation of Corel Linux Deluxe went smoothly. MapPoint 2001 is a mapping program that has a

lot of intriguing and powerful databae capabilites and integrate will with

the Microsoft Office suite. In addition to street-level maps of the US and

Canada, the program has multisourced demographic and census data, down to

individual ZIP codes.

TEXT: A Linux installation without pain, anda Microsoft product that shines. Will wonders never cease? By Russell Kay

I'VE BEEN CURIOUS about Linux for a long time, and I've actually received a

number of copies of it from various. distributors during the past several

years. But somehow, it never made it to the top of my project pile.

Last weekend, I took the plunge. I decided to attempt to install Linux on

the second hard disk on my home machine. I had three Linux versions on hand

- including Mandrake 70 from MandrakeSoft Inc. in Altadena, Calif., and TurboLinux Workstation 5.0 from TurboLinux Inc. in Brisbane, Calif. -

but I
opted to try Corel Linux Deluxe. I chose the version from Corel Corp.
in
Ottawa for two reasons: First, it came with a Linux version of
WordPerfect,
an application I've known and used for years; and second, I figured
that an
applications company might have paid more attention to installation
issues.

I started the install process fairly early on a day that I'd left
pretty
open, prepared for delays by all the horror stories I'd read. Except
for an
unrelated hardware issue that stemmed from a mixed SCSI-EIDE harddisk
environment, the installation went smoothly. I waited anxiously for the
system to lock up or ask me for some obscure technical information
about
system components that I wouldn't be able to supply.

Didn't happen. It installed, it booted up, it ran. The graphical K
Desktop
Environment (KDE) that was installed is fairly similar to the Windows
graphical user interface, and I was able to navigate it and start up
installed applications, including Netscape Navigator and an image-
editing
program, without fuss and without even opening the manual.

MAPPOINT 2001

Overall, I was impressed with how simply it went. I've installed just
about
every version of Windows, from 3.0 on up to 2000 Advanced Server, as
well
as several versions of Mac OS, and this Linux was smoother than most of
those.
Only in a few places did some of the raw underpinnings show through.
When I
used the file manager, I was greeted with the typical Unix directory
structure - /usr/bin/ and the like. But I found that I could avoid
facing
even that if I stored my documents and applications in the "My Home"
folder, which is accessed via a desktop icon, just like the Windows "My
Documents" folder.

Although I installed Linux into its own Linux-formatted disk partition,
WordPerfect was still able to read all my documents created with
Windows,
which were stored on FAT32 partitions.

Round I goes to Linux. The surprises, so far, have all been pleasant,
and
now I can begin to explore this new-to-me operating system with an eye
to
its usability. (I already know or at least expect - that it's going to
be
more stable and crash-proof than any of my current versions of

Windows.)

I'm looking at Linux not as a server platform but as an enduser client, trying to determine how good it is, how strange or different it is from what Microsoft Windows has accustomed us to and whether there is any reason to consider using it as a desktop operating system in preference to Windows.

My first conclusion is that there's no need for an ordinary user to be afraid of the graphical shells on Linux - or at least not the KDE shell that I tried. I'll try some others in the coming months. But it seems pretty clear that if you can find the application you need, Corel Linux works, and looks, pretty much like Windows.

Should information technology management think about using Linux as a desktop operating system? That's an intriguing question, but I'm going to let it hang in the air for a while.

Where Do You Want to Go Today?

Microsoft Corp. keeps asking us that question in its ads, and now it has supplied a firstrate package that can help us answer it. The product is MapPoint 2001, a mapping program that has a lot of intriguing and powerful database capabilities and integrates well with the Microsoft Office suite. in addition to street-level maps of the U.S. and Canada (a European version will be available soon), the program has multisourced demographic and census data, down to individual ZIP codes.

This isn't a full-fledged geographic information system (GIS), but in some ways it's better and easier to use. With MapPoint, you can drag a highlighted area of a spreadsheet representing, say, sales in various states during a certain period - and drop it onto a map of the U.S. It asks what style of representation you'd like and then creates a map that shows the data graphically. You can also use data directly from Access and Outlook.

You can give MapPoint 2001 a list of addresses and have it plot the most efficient route to travel to all of them - and you can customize the routing to take into account time-of-day travel factors. You can also create customized maps for downloading onto a pocket PC's Pocket Streets program.

I've used GIS applications and several other mapping programs. While they've all been useful and delivered what they promised, I've never found one that was easier to use or one that I like better.

New Version Offers Updated Maps and Demographics, Better Represents
Business Data Geographically, Allows Map Incorporation in Custom
Solutions
and Delivers

Tighter Office XP Integration

REDMOND, Wash., April 23 /PRNewswire Interactive News Release/ -

-
Microsoft Corp. (Nasdaq: MSFT) today announced the release to
manufacturing
of Microsoft(R) MapPoint(R) 2002 North America, the latest version of
its
business-mapping and location-based data visualization software. The
company is simultaneously announcing MapPoint 2002 Europe, which will
cover
most Western European countries and will be available in five European
languages. Both versions will be available to customers by the end of
May.

(Photo: <http://www.newscom.com/cgi-bin/prnh/20000822/MSFTLOGO>)

In addition to completely updated and expanded map content and
demographic data, MapPoint 2002 offers key new features for end users
and
developers, including greater map customization, territory creation and
display, an ActiveX(R) Control, a more comprehensive object model,
improved
support for Component Object Model (COM) Add-Ins, and tighter

integration
with Office XP.

"When making business decisions, location information is a key component," said Michael Graff, general manager of geography products for Microsoft. "With MapPoint 2002 up-to-date location and demographic data, our customers can chart, display and analyze their business information more effectively, enabling them to make more intelligent decisions about their businesses' past, current and future performance."

Up-to-Date Maps, Location and Demographic Information

Unlike traditional mapping applications, MapPoint 2002 offers users a complete combination of high-quality terrain, political data and roadway maps including over 6.4 million miles of routable streets and roads in North America and 4.8 million kilometers of roads and streets in the European editions. It also includes more than 70 measures of demographic data, address finding and multipoint routing functionality, as well as shaded-area mapping, all within a standard Microsoft Office family application. Microsoft creates and licenses the highest-quality spatial and demographic data available from leading vendors, including Geographic Data

Technology, Navigation Technologies and Claritas Inc.

Customized Maps Better Represent Business Information

MapPoint 2002 gives users the ability to customize maps to better represent their business information. A new territories feature allows customers to use existing geographic regions -- such as census tracts, postal codes or counties -- to build their own mapping areas. For example, once a territory is created, customers can overlay information such as sales or customer data, so regional or territory performance information can be easily compared and analyzed. With the new Drivetime Zones analysis tool, built on Microsoft's patented routing technology, users can determine and visually display areas that can be reached by car from a given location within a specified time. For example, an event planner could use the Drivetime Zones feature to invite only those customers within a 15-minute drive of the facility. Pie charts and column charts can also be added to maps to highlight multiple demographic or other data variables, and custom

icons and pushpins can be displayed on the maps to help communicate locations of customers, retail locations or other points of interest.

Greater Application Programmability Yields Custom Solutions

For developers, the new version of MapPoint includes an ActiveX Control, a more comprehensive object model and improved support for COM Add-Ins. These enhancements greatly expand the ability of corporate

developers or independent software vendors to integrate MapPoint functionality within a broad range of their business applications and custom solutions. With the rich functionality possible with the ActiveX Control, developers can embed a fully functional MapPoint map within their application and integrate the maps to work with whatever location data that application is using.

"With this release, MapPoint has become a serious spatial information management tool," said David Sonnen, IDC senior consultant for Spatial Technologies. "New features and access to mapping functionality through ActiveX will make MapPoint a good productivity option for a large group of business users."

Integrate Maps Into Everyday Work

The tighter integration of MapPoint 2002 with Office XP enables customers to easily transform geographic data from Office applications --

such as Word and Excel -- into data-rich maps using MapPoint Office Add-Ins

and Office XP's Smart Tag technology. Customers can incorporate maps into

the work they do every day. Now users can map data -- such as sales figures

by region or customer locations -- from Microsoft Excel, Access or the Outlook(R) messaging and collaboration client. They can embed MapPoint maps

into reports, presentations and Web sites using Word, the PowerPoint(R) presentation graphics program and the FrontPage(R) Web site creation and

management tool. They can also add maps to brochures and flyers with Publisher.

Pricing and Availability

MapPoint 2002 North America and Europe will be released to manufacturing on April 23 and will be generally available at the end of May. The product will be available from Microsoft resellers, Microsoft licensing programs and at <http://shop.microsoft.com/> at an estimated retail

price of \$249*. Current license holders of MapPoint 2000, MapPoint 2001 or

Office XP (any suite) are eligible for a \$50 (U.S.) or \$75 (Canadian) rebate when they acquire MapPoint 2002. European pricing will be comparable

but will vary per currency and is subject to currency exchange rate fluctuations. The ActiveX component may be licensed separately, with pricing to be released later this year.

Founded in 1975, Microsoft is the worldwide leader in software, services and Internet technologies for personal and business computing. The

company offers a wide range of products and services designed to empower

people through great software -- any time, any place and on any device.

* Reseller prices may vary.

Publisher Microsoft Corp., 800-426-9400, www.microsoft.com/mappoint

TO FIND OUT WHERE YOU are, nothing beats a map. Investors can view regions of the country in which your sales are growing, for example, by spotting green areas on a map; or they can note difficult areas you've identified in red. Trends are instantly noticeable.

Microsoft MapPoint 2000 is business mapping software that lets you pinpoint customer or business sites by typing an address (or a "famous location," such as the Empire State Building), and even annotate each location on a map with text such as custom driving directions or symbols such as lines and boxes.

The program has some 14 million street-level segments for U.S. addresses, providing boundaries for states, counties, metropolitan statistical areas, zip codes, and census tracts. It also provides geographic boundaries for non-U.S. locations.

You'll find numerous options in MapPoint 2000. If you're plotting populations, for instance, you can specify range sizes (such as 0 to 100,000 and 100,001 to 250,000) and which colors to use. Once your map is complete, you can save it to HTML; paste it into Microsoft Word, Publisher, or PowerPoint; or download it to your Palm OS or Windows CE handheld PC.

MapPoint supports four types of maps: shaded area, push-pin, shaded circles, and graduated circles. Wizards can help you choose the right style, provide assistance in selecting the data range (we used Excel data

without a hitch; you can also import Outlook, Access, SQL, or delimited text files), and choose appropriate labels. You can also use more than 50

different demographic census-based variables to compare sales by, say, income level, gender, or age group.

MapPoint is for illustrating points on a map. It doesn't provide driving directions between two points; but you can use a highlighting tool

to select starting and ending points, and MapPoint will color in the route

and provide distance in miles or kilometers.

PROS Easy to import and plot data

CONS Details only for U.S. locations

RATINGS

HOME OFFICE COMPUTING'S product scores are weighted averages of 1-

to 10-point ratings for: Value (30 percent of total), Performance (30 percent of total), Ease of Use (20 percent of total), and Suitability for

Home Office Use (20 percent of total).

KEY:

V = Value

P = Performance

E = Ease of Use

S = Suitability for Home Office Use

TEXT:

Your business wants to build a new corporate campus, but you need the approval of local zoning commissions. Put together a winning presentation

showing the benefits of your project.

Step 1: Show Yourself

Paste your logo on everything-this is your business we're talking about. Some services, like MapQuest.com and Anysite.com, do this automatically. If not, use an image editor like Jasc Paint Shop Pro or Adobe Photoshop and add your logo as a new image layer.

Step 2: Prove You're Right

Create a before-and-after demographic map. Import future projection

data to show how overall retail trade will increase in the surrounding area. Prepare your retail projections for two and five years out in Excel

or in a database. Use Microsoft MapPoint 2000's Data Mapping wizard to import the data, and select the current sales figures as the comparison benchmark. Choose a livelier color set from the drop-down box on the Data

Range screen than you used for the before map-after all, you want to show a bright future.

Step 3: Polish It Off

Use the iSite Map Logos to demonstrate what types of businesses are likely to spring up as a result of your company's presence in town. If your mapping software supports your choice of font, just load the Map Logos font, check your symbol table for the right key sequence for the logo you need, and type the logo into place. If your mapping software isn't flexible

enough, you'll need to use an image editor to paste in the logo later.

Step 4: Make Changes from the Field

Send your building-survey team out with FieldSmart Connect and show the planning commission the onsite notes your people added to your map-from the field.

Map Point 2002 Here Comes Microsoft!

(Microsoft's new consumer business mapping program debuts)

Geospatial Solutions, v 11, n 6, p 18

June 2001

DOCUMENT TYPE: Journal ISSN: 1529-7403 (United States)

LANGUAGE: English RECORD TYPE: Fulltext

WORD COUNT: 241

TEXT:

Microsoft (www.microsoft.com) announced the release of Microsoft MapPoint

2002 North America, the third version of its consumer/business mapping program. The company simultaneously rolled out MapPoint 2002 Europe, which

is available in five European languages. Both products are aimed at the

average business person and feature functionality familiar to Microsoft Office users. To see a map showing sales of multiple products by ZIP code,

for instance, customers Simply drag and drop their data onto the map.

The

product's data mapping wizard then guides the user through the process step-by-step.

The new release includes expanded map and data content, including demographics from GDT (www.geographic.com), Claritas (www.claritas.com),

Compusearch (www.compusearch.com) and NavTech (www.navtech.com).

According

to Microsoft, more than 65 GB of compressed data are available. The package

is also said to include terrain data (although Microsoft did not specify

the type), political data, and roadway maps comprising more than 6.4 million miles of routable streets in North America and 4.8 million kilometers in Europe.

For developers, the new version of MapPoint includes an ActiveX Control, a more comprehensive object model, and improved support for addins. This enables developers to embed fully functional MapPoint data into their applications. End users will be able to put maps into other Microsoft products, including Word, Excel, and Outlook.

The 2002 version supports GPS data for waypoints, territory management, and drivetime analysis. Users can create custom symbols from bitmaps, icons, and cursors and can locate pie and bar charts on maps.

MICROSOFT: MapPoint 2002 opens up a world of possibilities

M2 PRESSWIRE

April 24, 2001

JOURNAL CODE: WMPR LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 1547

Microsoft today announced the release to manufacturing of MapPoint

2002, a new version of the business mapping application that combines

powerful mapping and analysis tools with the simplicity of Microsoft

Office. MapPoint enables users to visually analyse and communicate business

information using maps. In a conversation with PressPass UK, Zena Girdler,

product-marketing manager for MapPoint at Microsoft, discusses how MapPoint

2002 helps businesses visualise data using geographic information.

PressPass: How can businesses make use of geographic information using

MapPoint 2002?

Girdler: Much of the information stored in company databases today has

some sort of geographic element to it, whether that information is related

to an address, a state or a postcode. Unfortunately, this information is

typically only viewed through a spreadsheet, a table or a graph.

Rarely is

this information analysed in its most logical format - on a map.

With

MapPoint, businesses have the ability to visualise their information

in a new way and get a new perspective on their performance, their competition and their customers. By understanding the location component of common business data, such as sales or customer lists, they can make more informed decisions. This viewpoint also helps to identify trends or business performance issues that they may have otherwise overlooked.

PressPass: What sort of geographical data could businesses use to be more successful?

Girdler: Some excellent examples of geographical data that are useful to any business include sales data, competitor locations, customer lists and service records. Using MapPoint, a business can identify whether geographic or demographic variables may be affecting sales of a particular product.

They can examine whether their business could become more efficient by reassigning sales or delivery territories. They can investigate whether the location of competitors could be influencing the sales performance of a particular location. Or they can analyse different areas to determine whether they appear to be good prospects for expanding the business.

MapPoint can also be extremely valuable in day-to-day business operations.

For example, a business manager may decide that she wants to identify all customers within a 15-minute drive of her facility, or perhaps within a short drive of a hotel where she is planning to hold a meeting. With MapPoint 2002, she can use the new "Drivetime Zones" feature around that facility, then select all the data points within that zone and export those records to Microsoft Excel for inclusion in a mailing list. The Drivetime Zones feature is also useful in planning delivery routes or customer visits.

PressPass: What differentiates MapPoint from other business mapping tools?

Girdler: MapPoint is unique because it comes with all of the data and tools customers need to effectively visualize and communicate information using maps. Microsoft also creates and licenses the highest quality

spatial
and demographic data available, whereas many other mapping products
require
users to purchase additional data sets to perform certain functions.
MapPoint 2002 has vastly simplified some functions that
have
traditionally been complex and made them more accessible to the
average
business user. For example, to see a map showing sales of multiple
products
by ZIP code, MapPoint customers can simply drag and drop their data
onto
the map.

MapPoint's data-mapping wizard will guide them through the
process,
step by step. There are no complex concepts or terminology to learn
- if
users are familiar with any Microsoft Office application, they
can
immediately get up and running with MapPoint.

PressPass: How have the customisation capabilities of MapPoint
been
improved?

Girdler: First, new data-mapping features such as pie charts,
series
charts and column charts, as well as multiple pushpin symbols, have
been
added to increase users' ability to customise the way their maps
are
displayed.

Custom pushpin symbols are now offered so users can put
their
company's logo into their maps, or any other symbol they want to
create, in
addition to the dozens of symbols already included in the product. To
many,
this may seem like a minute detail, but the ability to add a logo or
any
other graphic and tie that into a location really has strong
communication
value. This feature alone makes a map more personal, and it seems
to be
resonating very well with MapPoint users.

PressPass: What does support for Microsoft ActiveX, Microsoft
Visual
Basic and COM mean for businesses rolling out MapPoint?

Girdler: It gives software developers the ability to access
MapPoint
functionality programmatically, so they can start integrating
customised
maps and location intelligence into their own solutions or line-of-
business
applications. MapPoint can now be built into an independent
software
vendor's application or into an organisation's custom business
solution,
which opens up a lot of possibilities for businesses to include

mapping

within the context of their existing solutions.

PressPass: How has the content in MapPoint 2002 been improved?

Girdler: We're constantly working to ensure that our content is up to date, bringing in the most recent demographic information from firms such as Claritas and CompuSearch. Plus, we've added more points of interest, so when customers launch MapPoint 2002 they will be able to locate restaurants, airport information, gas stations, ATMs, hotels, hospitals, campgrounds, even freeway exits. The North American version now includes over 6.4 million miles of streets, updated maps, demographics for 2000 and projections into 2005. Nearly 1 million points of interest are completely updated. Our European version also includes new, detailed maps with expanded street-level coverage and data in more areas. We also provide a Web search capability in MapPoint that works with MSN to search the Internet for related links for any place a customer clicks on the map.

PressPass: How will MapPoint 2002 work with Office XP?

Girdler: We've always done a great job of sharing information to and from Office applications, and MapPoint 2002's Office XP integration goes even further. In Excel, for example, customers can highlight a table of numbers and click the MapPoint button on the toolbar. If there is a geographic variable within the spreadsheet, MapPoint will embed a map and launch the data-mapping wizard to give them a view of that data on a map, right within Excel.

We have also added support for Smart Tags. So, if there is any piece of geographic data such as a state, city name or address in Word or Excel, MapPoint can automatically look up that location or address. Customers can also export selected information into Office applications. There are really countless ways businesses can take advantage of this, such as generating a list of customers within one of the Drivetime Zones, exporting selected demographics for further analysis in Excel, or embedding maps into Microsoft Word documents or Microsoft PowerPoint presentations.

PressPass: Will MapPoint 2002 be packaged with Office?

Girdler: No, MapPoint is available only as a standalone

application.

However, MapPoint is part of the Microsoft Office family of applications.

This means that MapPoint 2002 looks and behaves like Office and can easily share data with Office applications.

PressPass: How does MapPoint 2002 fit into Microsoft '.NET'?

Girdler: We are exploring several exciting opportunities for using Microsoft '.NET' services, technologies and tools to deliver new capabilities to our customers. Our goal is to provide more-frequently updated map and demographic data, and to enable geographic functionality on a wider array of mobile devices. These are just a few of the things we'll be working on for future releases.

Right now, MapPoint gives customers the ability to connect to the Internet and download the most current road-construction data for the United States, so driving directions include warnings and notices for areas with planned construction activity. And with MapPoint 2002, customers can communicate their information via the Web using the enhanced "Save as Web Page" feature.

Web pages saved from MapPoint 2002 can include hyperlinks to other maps, Web pages or files, and users can set their MapPoint Web pages to update each time the underlying MapPoint file is saved so the maps on the Web page always show the latest data.

PressPass: Will MapPoint eventually become a Web-based service?

Girdler: This is something we are looking at quite seriously. The main benefits to going in this direction would be the ability for customers to access their data from any Web-connected device, and the ability to always get the most updated map and demographic data and points of interest information. In addition, we believe there are great opportunities for integrating location intelligence and information into a wide range of customer applications on both wired and wireless devices. We'll continue to spend a lot of time talking to our customers to determine the best way to meet their needs and expand the capabilities and usefulness of our maps and

geographic information.

Founded in 1975, Microsoft (Nasdaq "MSFT") is the worldwide leader in software, services and Internet technologies for personal and business computing. The company offers a wide range of products and services designed to empower people through great software -- any time, any place and on any device.
